Dear Hiring Manager,

My career has taken me on an unconventional but deeply meaningful path—from **studying microbiology, to working in pharmaceutical tech compliance, to immersing myself in healthcare informatics**. At every stage, I've found myself drawn back to one steady interest: understanding how healthcare systems function and how data, documentation, and workflows can be improved to support better patient care. This long-standing curiosity is what now **drives me to pursue opportunities** where I can contribute **to healthcare delivery through analysis, coordination, and informed operational support**.

Through my Health Informatics program at the University of North Texas, I have gained extensive experience working with **EHR structures (DIKW), clinical datasets (Metadata, Medical Codes), interoperability concepts, regulatory frameworks, and hospital workflow analytics**. My internship at Manipal Hospitals provided direct exposure to **emergency and inpatient processes (GCP), including documentation reviews, throughput evaluation of cross department (ICH), provider coordination (HIPAA), and dashboard development (Python, Power BI)** that helped improve visibility into clinical performance. I have also completed several data-driven projects analyzing length of stay, surgical utilization, discharge summary quality, and departmental efficiency experiences that mirror many operational priorities within U.S. healthcare systems. Currently, I am conducting research with **Dr. Ana Cleveland** on **EHR clinical data**, focusing on patterns of documentation and opportunities to optimize **structured and unstructured** data for both clinical care and operational decision support.

With a combination of **scientific training, regulatory experience, and practical healthcare data exposure**, I bring a **multidisciplinary perspective from a human centered as well as AI mindset** to improving healthcare efficiency and data accuracy. I would **welcome the opportunity** to contribute this perspective to your organization and to support initiatives that strengthen **clinical operations and decision making**.

Warm regards,

Niveditha Shivashankar
