Dear Hiring Manager,

My background combines microbiology, healthcare compliance, and health informatics, with a consistent focus on understanding how data and workflows impact real-world healthcare operations. Over time, this has led me to work more closely with healthcare data as to how it is captured, validated, and used to support both clinical and operational decisions.

In my current role supporting Aetna operations at Sutherland, I work on maintaining and validating provider data across payer systems. This involves reviewing provider records, performing data quality checks, resolving discrepancies, and ensuring alignment with regulatory and enrollment requirements. I also use tools like SQL and Power BI to track data trends and identify issues that affect accuracy and reporting.

Earlier experiences at Manipal Hospitals and Merck gave me exposure to clinical documentation, compliance processes, and working in regulated environments. I've worked on audits, reporting, and data quality initiatives, which helped me understand how structured data supports both patient care and organizational performance.

Alongside this, I am pursuing a Master's in Health Informatics at the University of North Texas, where I've developed a stronger foundation in healthcare systems, EHR data, and analytics. I'm particularly interested in roles that sit at the intersection of healthcare, data, and operations, where there is an opportunity to improve processes and make systems more reliable and efficient.

I would appreciate the opportunity to bring this experience and perspective to your team. Thank you for your time and consideration.

Warm regards,
Niveditha Shivashankar
