Dear Hiring Manager,

My academic and professional journey kick started from microbiology to pharmaceutical compliance and healthcare informatics. This roadmap has been driven by a consistent goal: understanding how healthcare systems function and how data, documentation, and workflows can be optimized to support high-quality patient care. This interdisciplinary background positions me well to contribute to healthcare organizations focused on operational excellence and data-driven decision-making.

I am currently pursuing a Master's in Health Informatics at the University of North Texas, where I have gained hands-on experience with EHR structures, clinical documentation standards, healthcare data models, interoperability concepts, and regulatory frameworks. Through my recent internship at Manipal Hospitals, I supported emergency and inpatient operations by conducting documentation audits, assisting with compliance monitoring, coordinating across departments, and developing performance dashboards using SQL, advanced Excel, Python, and Power BI. These efforts improved visibility into documentation quality, throughput trends, and operational performance for leadership teams.

Previously, I worked at Merck within healthcare and life sciences compliance, supporting regulated clinical and operational workflows, audit readiness, and cross-functional reporting. This experience strengthened my ability to translate regulatory and clinical requirements into structured, actionable insights which I continue to apply in healthcare analytics and operations.

In addition to professional experience, I have completed applied projects focused on length of stay analysis, discharge summary quality, emergency department documentation compliance, and departmental efficiency. I am also currently engaged in research under Dr. Ana Cleveland, analyzing EHR clinical data to identify opportunities to optimize structured and unstructured documentation for both clinical care and operational decision support.

With a strong foundation in clinical science, healthcare compliance, and analytics, I bring a multidisciplinary, human-centered, and data-driven perspective to healthcare improvement initiatives. I would welcome the opportunity to contribute this background to an organization committed to strengthening clinical operations and developing future healthcare leaders.

Thank you for your time and consideration.

Warm regards,

Niveditha Shivashankar
